

Case Study

+ Warehouse & Racking Solutions

AR Racking - Lichfield

SOL Services successfully delivered the installation of a large-scale pallet racking system at AR Racking's facility in Lichfield, completing the build within a tight 4-week timeframe.

The project involved the installation of 6,428 pallet racking locations, utilising 10,500mm high frames to maximise vertical storage capacity and optimise the warehouse layout. Rack end protection and plastic upright guards were installed throughout to enhance safety and protect the racking system from potential impact damage.

Working to a strict schedule, the SOL team ensured the installation was carried out efficiently, delivering a durable and high-performing storage solution that meets the operational demands of a fast-paced logistics environment. The project reflects SOL Services' commitment to quality, speed, and safety in warehouse infrastructure projects.

Client Benefits

- + Maximised Storage Efficiency
- + Enhanced Safety Measures
- + Fast Project Turnaround
- + Durable, High-Performance Solution
- + Optimised Operational Flow
