George Eliot Hospital

In just 12 weeks, SOL Services mobilised to carry out a full refurbishment of the Nason and Melly wards at George Eliot Hospital, ensuring minimal disruption to the facility's operations.

The project involved the replacement of air handling units, installation of new ductwork for heating and cooling, and upgrades to the extraction system. Working on an accelerated 24/7 programme, our team completed the HVAC refurbishment and ensured the system was fully commissioned to support the hospital's needs.

This comprehensive upgrade has provided enhanced heating, cooling, and air quality for the wards, reflecting the high standards of care required in a healthcare setting. The client commended the efficient turnaround and dedication to maintaining operational continuity during the works.
