

Case Study

+ Civils & Groundworks

BCA - Blackbushe

SOL Services were appointed to deliver an overclad roofing solution at BCA Blackbushe, involving the installation of a new system over an existing double-skinned roof. The project required the erection of full perimeter edge protection scaffolding, complete with a safe access staircase, to ensure compliance with health and safety standards while working at height.

Through efficient planning, strong site coordination, and a proactive delivery approach, SOL Services significantly accelerated the programme, completing the works in just 5 weeks, 3 weeks ahead of the original 8-week schedule. Despite the reduced timeframe, all works were delivered to a high standard, with no compromise on safety or quality. The client expressed particular satisfaction with the speed and efficiency of delivery.

Client Benefits

- + Programme reduced by 3 weeks, minimising disruption to operations
- + Enhanced roof performance and longevity through overclad system
- + Safe working environment ensured through robust access and edge protection
- + High-quality delivery within a significantly accelerated timeframe
- + Positive client experience with efficient and well-managed execution generation

Services Provided

- + Installation of overclad roofing system to existing double-skinned roof
- + Design and installation of perimeter edge protection scaffolding
- + Provision of safe access staircase for roof works
- + Full project coordination and accelerated programme delivery
- + Health and safety management for working at height
- + Temporary steam boiler provision to facilitate live system works
